

# Want to try out our 3D Printer?

1. Choose an print-ready object to print from sites like *Thingiverse.com*, or design your own object! You can create your design on any library computer or lendable Chromebook on sites such as *TinkerCAD*.

Files need to be in **.stl** format.

2. Save your file in the **3D\_Print\_files** folder. You can find the folder on all our computers.

3. Change your file name to the following:

Email\_description.stl or

Phone#\_description.stl

(That way we know which is your file.)

4. Come to the **Info Desk**, and we'll tell you the price and how long your print job will take.

\$1.00 to start the print job + material costs.

**4 hour print time limit**

- Quality: medium build (0.2 mm)
- Material: PLA plastic
- Single Colour prints only
- Remove supports or marks at home with fine sanding paper.

Our 3D printing space is intended for learning, experimentation, and small-scale projects.
